

# RTiL

## Student Project

**Author: Macarie Paul Andrei Constantin**  
**coordinator Birtok Baneasa Corneliu**

**RTiL real time intuitive lamp** is a device designed for road safety, the main purpose being the real-time warning of traffic participants on events and traffic conditions (works, congestion, unevenness, etc.).

**RTiL real time intuitive lamp** este un dispozitiv destinat sigurantei rutiere, scopul principal fiind avertizarea in timp real a participantilor la trafic asupra evenimentelor si conditiilor de circulatie (lucrari, blocaje, denivelari, etc.).

**RTiL**, the intuitive rear light, communicates with the vehicle's safety systems (video cameras, ABS, ESP, radar, etc.) and / or traffic control centers (in the case of highways) allowing the warning by displaying specific symbols in order to increase traffic safety.

**RTiL**, lampa spate intuitiva, comunica cu sistemele de siguranta ale autovehiculului (camere video, ABS, ESP, radar, etc.) sau centrele de control trafic (in cazul autostrazilor) permitand avertizarea prin afisarea simbolurilor specifice in vederea cresterii sigurantei traficului.
