The proposed solution refers to an implementation of patent application no. 00889/12.12.2019 and consists of a gearbox intended to equip vehicles with pedals.

SCAN ME

The gearbox is a mechanical reducer characterized by the fact that it provides assistance when pedaling through an electric motor, assistance that can be achieved in three modes: low, medium and high, self-adaptive depending on the value of the load torque that must be overcome. The major advantage is that changing gears becomes unnecessary.
